

We are pleased to present the completed **Nexus FMS (Facility Management & Maintenance System)**. The system has been built with a clean 100% Corporate Light Theme (#00204a), fast navigation, and fully automated workflows for both Office Admins and Field Technicians.

Below is the complete walkthrough addressing all features, system roles, and automated flows:

=====

1. 🏢 OFFICE ADMIN PORTAL (/admin/*)

=====

📊 1. Dashboard (<http://localhost:5174/admin/dashboard>)

- Real-time counters for Active Quotes, Active Jobs, Completed Jobs, Jobs Waiting Booking, and Staff Utilization.
- Warehouse Low Stock Alerts with 1-click restock actions.
- Weekly maintenance volume trends and trade category breakdown charts (Plumbing, Electrical, HVAC, Carpentry).

🔄 2. Workflow Maintenance Pipeline (<http://localhost:5174/admin/pipeline>)

Tracks work orders across 5 clear operational stages:

1. Quotes: Incoming repair requests pending estimation/photos.
2. Completed Quotes: Approved quotations ready for booking.
3. Jobs: Active repair tasks assigned to technicians with scheduled date/time slots.
4. Completed Jobs: Finished work orders with before/after photos and technician notes.
5. Jobs Waiting Booking: Orders where a booking link has been sent to the resident via SMS/Email, awaiting resident slot selection.

🔗 3. Booking Link Generator (<http://localhost:5174/admin/booking-links>)

- How it works: Admin generates a secure booking link for the resident with an expiry duration (e.g., 7 days).
- Status Tracking: Shows 'WAITING FOR BOOKING' (Yellow Badge) with a "View Details" popup to copy SMS links or inspect request info.

- Automatic Stage Progression: The instant the resident opens the link on their phone and selects a date/time slot:

- Status automatically updates to 'BOOKED' (Green Badge).

- The job card automatically moves from 'Jobs Waiting Booking' column to the active 'Jobs' column!

📷 4. Quote Photo Requests (<http://localhost:5174/admin/quote-requests>)

- Allows Admin to request initial repair photos from the resident prior to assigning a technician, eliminating unnecessary diagnostic visits.

📅 5. Staff Maintenance Calendar (<http://localhost:5174/admin/calendar>)

- Monthly View: Full 30/31-day calendar grid with ◀ Previous Month and Next Month ▶ navigation controls. Displays day numbers, job counts, resident names, assigned technicians, and time slots.

- Weekly Schedule: Classic side-by-side matrix displaying all 4 technicians, working hours, break times, and booked repair slots.

- Daily Timeline: Hourly time slots (08:00 to 17:00) showing real-time staff availability.

=====

2. 🛠️ FIELD TECHNICIAN PORTAL (/maintenance/*)

=====

📁 1. Assigned Work Orders (<http://localhost:5174/maintenance/my-tasks>)

- Clean, clutter-free compact table list (Job Title, Resident & Location, Scheduled Slot, Stage, Actions).

- '👁️ View & Action' Modal:

- Displays full job description, property address, gate access codes, and resident phone links.

- Proof Photo Management: Upload Arrival ("Before Repair") and Completion ("After Repair") photos with explicit 📷 Change Photo and 🗑️ Remove Photo options.

- Technician Notes & 1-click 'Mark Job Completed' sign-off.

📅 2. Personal Shift Calendar (<http://localhost:5174/maintenance/calendar>)

- Privacy Isolation: Logged-in technicians strictly see ONLY their own assigned repair bookings, shift hours, and break times.

=====

3. 📱 100% MOBILE & SCREEN RESPONSIVENESS

=====

- Fully responsive layout across Mobile (320px+), Tablet, and Desktop monitor screens.
- Mobile drawer navigation sidebar with backdrop blur overlay and horizontally scrollable calendar grids.

Please test the live application at <http://localhost:5174/admin/dashboard>. Let us know if you need any additional walkthrough!
